# Temperature Sensors

## Technology and application

### Functionality

The compact models TN 552 GPP and TN 552/1 GPP have two independent adjustable switching points. The compact models TN 552 GAPP and TN 552/1 GAPP have one independent adjustable switching point and one scalable 4...20 mA analog output.

The detecting range for fluids is from -40 °C to +120 °C, the tolerance is 0.3 °C (0...80 °C).

The compact models TN 552... offer a window function as an alternative to the standard limit monitoring. Additionally, the NO/NC output function is programmable. Transient temperature changes can be bridged with a switch-on / switch-off time delay.

The push-buttons on the front of the sensor are used for programming the sensor functions. The programmed switching point and parameters are displayed and set by keyboard request. This function is possible while the sensor is measuring.

### Temperature sensor with threaded sleeve allowing for exchange during ongoing operations

The temperature sensor TN 553 can easily be exchanged during ongoing operations. This is made possible through the use of a special stainless steel (AISI 316 Ti) threaded sleeve that is mounted in the tank or pipe. In this way the compact device can at any time be removed without compromising the seal of the tank or pipe. The temperature sensor measures temperatures from -40 °C to +120 °C and offers, among other features, two programmable switching points, freely selectable hysteresis and a temperature window function. The device is available as a 24 V DC device with PNP or analog output as well as a 230 V and 115 V AC model with Opto-MOS. Various cable lengths and optional plug-in or hardwire connections allow the device to be installed in various configurations. The thread is a G1/2 gauge.

### Installation

EGE temperature sensors can be installed in standard T-pieces or welded T-pieces. The packing is made with an additional flat seal or with other suitable materials. Please note the temperature and pressure resistance of the seals for increased process conditions. Fixing the sensor in the T-pieces is only allowed on the screw head of the sensor. After the installation the display can be turned through an angle of 330° for best reading. In applications with temperature over +80 °C the sensor should be mounted from the side into the pipe.

### Application

The hysteresis function is for controlling a temperature value. A limiting value can be programmed in this mode. As soon as the measured temperature is higher than the programmed limiting value, the output signals are switched as programmed (NC or NO). The hysteresis value is the difference temperature for the switch-on and switch-off signal of the limiting value. An additional time delay for the switching signals can be programmed for each switching point.

In the frame function mode the switching function is set depending of a programmed temperature range. The temperature range starts with the programmed lower value and end with programmed upper frame value.

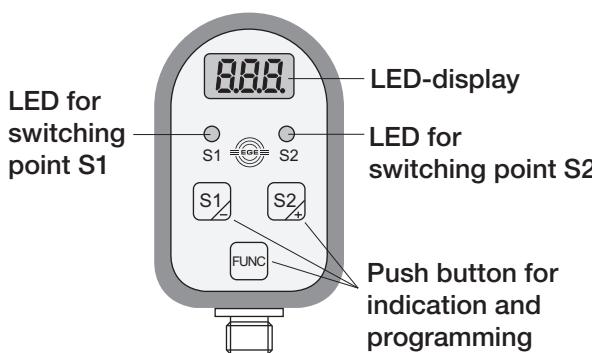

The time delay for the switching signal can also be used in this switching mode.

The analog output can be used for transmitting the temperature and getting the proportional current. For that you assign one temperature for the 4 mA first-value and one temperature for the 20 mA last-value in the programming mode. Between the temperature values it is permissible to have a minimal difference of 16 °C.

## Technology and application

### Monitor temperatures in the best possible manner

EGE features standard measuring elements for temperature in a robust and easy-to-install design which is best suitable for the respective industrial application or automation task - available for ATEX Zone 22 or with GL certificates as well.

Examples are the TGM 025-03 for monitoring of hot gases up to 1000 °C (available with evaluation unit as an option) or the TGM 050-TS for monitoring of threshold temperatures for overheat protection.

Our temperature sensors TGB in standard enclosures with resistance- or analog signal exit complement our range of products.

### Compact temperature sensors with integrated evaluation electronics Series TGBA

The temperature sensor TGBA 050 GI with a type B connection head according to DIN 43729 cover a -50...+400 °C temperature range and transmit measured data via an analog 4...20 mA output. Sensors are as well available with resistance output. The accuracy is ±1%. Available with lengths of 50, 100, 200 or 400 mm, the device are mounted via a G1/2 thread. The aluminium connection head, which is suitable for temperatures between -25 and 70 °C, reaches protection ratings of IP 54 on the connection side and IP 68 on the sensor side. TGBA sensors are pressure-proof up to 40 bar. If requires, EGE also provides customized sensors models.

### Monitoring of temperature thresholds under extreme environmental conditions Series TGM...-TS

The TGM 050-TS series of temperature sensors provides a robust solution for the monitoring of temperature thresholds. Designed for a temperature range between +60 and +100 °C, TGM 05 sensors open a contact if a pre-set temperature is exceeded. The threshold is set by the manufacturer in 5 °C increments according to customer specifications. Thanks to IP68 / IP69K protection on the medium side and a stainless steel housing, the sensors provide excellent media resistance. Additionally, they withstand pressures up to 30 bar. They are installed by means of a G1/2 thread and are suitable for switching voltages up to 230 V AC.

### Reliable temperature monitoring: Sensors for hot gases up to 1000 °C Series TGM...-03

Suitable for media temperatures between -50 and +1000 °C, the stainless steel temperature sensor TGM 025-03 is designed to monitor hot gases. The very compact unit is integrated by means of a G1/4 thread and uses a type K thermocouple to register temperatures. The TGM 025-03 sensor can be connected to any standard amplifier for type K thermocouples.

### Note

Sensors with NC output are connected to 4 pole cable plug housings. In this case, the break output is connected to the white lead (connection 2).

## A selection

### Flow sensors

- Electronical monitoring of flow
- Lubrication monitoring
- Measuring range 0.1 ml/min...100 l/min
- Detection range 1...300 cm/s
- Reaction time 0.5 s

### Level sensors for Ex-applications

- For level monitoring in Ex areas
- For temperatures –35...+200 °C
- With PTFE connector cable
- Sensors for connection to amplifiers

### Level sensors

- For level monitoring –230...+230 °C
- Steam proof at a pressure of up to 30 bar
- For hot motor oil
- For liquid nitrogen
- For chemically aggressive media

### Ultrasonic sensors

- Switching distance up to 6000 mm
- Level monitoring
- Watertight housing
- Teach-in functions

### Pressure sensors

- Monitoring in pipes and containers
- Pressure up to 16 bar
- Level up to 10 m ( $\pm 1$  cm)
- Compact models
- Programmable

### Infrared detectors

- Measurement of temperature
- Monitoring of hot media
- Position control
